ZOLAFINISH STAINLESS STEEL CLEANER for COMMERCIAL KITCHENS

32 oz, 1 Gallon or 5 Gallon “Just Add Water” Product Mixing Instructions

Items Needed:

1. Container of ZolaFinish Stainless Steel Cleaner for Commercial Kitchens – Just Add Water

2. Water

- ★ **PRO TIP:** Warm regular water can be used, but to get the best results, use room temperature **reverse osmosis water**, which is commonly found at any grocery store; the use of hard water will reduce or lessen the cleaning performance of the solution

Mixing Instructions:

- 1. SLOWLY** fill container of ZolaFinish Stainless Steel Cleaner with warm water; leave very little space at top of bottle
 - ★ **PRO TIP:** for 5-gallon containers, use a stirring instrument to stir/mix the ZolaTerra-/water solution; ensure the instrument is clean and free of dirt or chemicals prior to use
 - ★ **PRO TIP:** When reusing bottles and sprayers, ensure both are thoroughly cleaned before mixing and filling with the ZolaFinish solution; skipping this step may impact the effectiveness of the cleaning mixture.
- 2.** Twist on sprayer or cap tightly onto container
- 3.** Slowly shake or mix container

When cleaning, be sure to use a clean rag, towel or paper towel. Spray liberally across the entire surface, as this product will not harm your hands or stainless-steel surface in any way. Follow instructions on bottle. It is a safe yet effective plant based cleaner.

FREQUENTLY ASKED QUESTIONS

Is ZolaTerra® flammable?

No. ZolaTerra® is non-flammable.

What if I accidentally mix ZolaTerra® with other cleaners?

ZolaTerra® is non-reactive with caustics or acids.

Will a ZolaTerra® product separate over time after it is mixed?

The ZolaTerra® ingredients and products are specifically formulated to remain as a solution with water. The even distribution of this blend of ingredients on a soiled surface is the key to ZolaTerra® cleaning power.

What if I blend my ZolaTerra® concentrate too strongly? Will it harm my equipment?

No. You will simply have a very strong ZolaTerra® solution. This doesn't mean it will clean better, as we formulate our cleaners to work for specific solutions.

Will using hard water impact the effectiveness of the cleaning solution.

Yes, using hard water will reduce or lessen the cleaning performance of the solution. To get the best results, use room temperature **reverse osmosis** (RO) water, which is commonly found at any grocery store. (Water without calcium, magnesium or any other minerals) (RO water is typically less than \$1/gallon and will state on the label "made by reverse osmosis").

How do I know ZolaTerra® is committed to the environment?

ZolaTerra® is accredited by the Leaping Bunny certification, EPA's Bio-Based Program. We have also had testing completed by an independent lab to confirm that ZolaTerra® products are not only safe when discharged with waste water, we reduce the chemical and biological load upon municipal sewer systems.

ZolaTerra® products are plant-based, safe, and intended for cleaning purposes only. They should not be intentionally swallowed or sprayed into the eyes. This is a natural, plant derived product, color may vary by batch.

Registrations & certifications:

Unlike other "green" products in the market, ZolaTerra® is the only plant-based, biodegradable, food safe cleaning product line certified with the NSF Non-Food Compound Product Registration and USDA Certified Biobased Product designation.
