Headlight and Taillight Instructions

Securing the Mount To Your Bike.

You do not need any tools here! Simply choose the right sized rubber spacer (if thin bars, you might need both) to secure the bike mount onto your handlebars. Make sure you pick a spot that does not interfere with cables or any other important items mounted on the handlebars. Then put both sides of the mount around the bars over the desired rubber spacer, and screw the bottom screw into the upper mount until the mount is snug and firm. Please do not over tighten! If the mount is still slipping after hand tightening, you can try wrapping some black or friction tape on the bars under the mount to give the mount a better surface to grip to.

Mounting the Headlight

Place the Flashlight into the front of the round open top piece of the mount, so that the light is all the way as far back as it can go. Tighten side screw until it is also snug and firm, making sure that the light cannot fall out while riding. You can push the button on the back of the light to switch modes, and you can slide the front bezel to zoom.

Inserting the Batteries

Placing the batteries in the bike light is simple. Just unscrew the back of the light where the button is. Then tip the head of the light upwards, causing the battery holder to come out the bottom. Place 3 AAA batteries into the battery holder, making sure that you put the positive side and the negative sides in according to the imprint on the battery holder (+ and -).

The Aluminum Taillight

Simply wrap the taillight around the seat-post underneath the seat, with the light aiming towards the back. Clip one side of the black silicone strap onto the white clip that is connected to the other black silicone strap, making sure that the light is firmly mounted. Press the button in the middle, making sure that all 3 light modes work, and that the light is bright and ready to go.

To change the taillight batteries: Just unscrew the cap of the light to reveal the CR2032 batteries. Replace those with 2 new CR2032 batteries. Carefully put everything back in place the way you took it apart.
