300 Lumen Wide Angle Bike Light Set Features and Instructions

Light Set Features

• Brand new LED Strip Technology creates a wide diffusion pattern of light for a safer ride
• Mount is made from NASA-Strength Teflon
• Adjustable Rotation up to 25 degrees left or right to comfortably align with your handlebars
• Quick release mount for incredibly easy installation, use, and removal.
• Small enough to fit in your pocket so you can take it with you when your bike is unattended as an anti-theft measure.
• High, Medium, and Strobe modes for maximum visibility
• Ultra bright red taillight provides safety for day and night

As with all of our lights, you have the satisfaction of knowing your headlight is covered under our No-Hassle Lifetime Warranty. If you have any questions, comments, or concerns, please contact us at service@brighteyesproducts.com.
Securing the Mount To Your Bike.
You do not need any tools here! Make sure you pick a spot that does not interfere with cables or any other important items mounted on the handlebars. Then put both sides of the mount around the bars, and screw the bottom screw into the upper mount until the mount is snug and firm. Please do not over tighten! If the mount is still slipping after hand tightening, you can try wrapping some black electrical tape or friction tape on the bars under the mount to give the mount a better surface to grip to.

Mounting the Headlight
Due to the quick release style, you simply need to line up the rails with each other and slide the headlight back onto the mount until it clicks. To release the headlight push the tab on the back of the mount, and slide the headlight forward until it is completely removed from the mount rails.
Mounting the Taillight
Simply wrap the taillight around the seat-post underneath the seat, with the light aiming towards the back. Press the button in the middle, making sure that all 3 light modes work, and that the light is bright and ready to go.

Replacing the Batteries
Pull the red silicone rubber from off the back. There will be a white plastic round cover in the back of the light. Remove that cover and there will be 2- CR2032 batteries under the cap. Replace those with 2 new CR2032 batteries. Carefully put everything back in place the way you took it apart.
