

Repositionable Sticker Fabric

Create unique, repositionable fabric stickers to brighten up your room. Print directly onto these adhesives backed 100% polyester sheets using a top-loading inkjet printer. The fabric sheets have a paper backing to help them feed through your printer smoothly.

They are so simple to use; print onto them as if printing normal paper then cut out your design. Peel off the backing paper to reveal the adhesive coated underside and apply your sticker to your chosen surface. It will stick to almost any surface and can be peeled straight back off again leaving no sticky residues.

Do not attempt to remove or reposition the backing paper prior to printing.

Instructions

Step 1 - Choose your design and resize it to fit your fabric sheet.

Step 2 - Place the fabric sheet into your printer feed tray. Make sure it is straight and that you will be printing onto the fabric side of the sheet. Set your print quality to 'Photo Quality' or similar, leaving the paper type as 'Plain Paper' or similar. Select the correct paper size, then print. If the fabric catches on the side of the printer whilst printing you can use your finger to gently encourage it back into the correct feed position.

Step 3 - Leave the fabric to dry. If you wish to cut out your design, do this before removing the backing paper.

Step 4 - Make sure that the surface you want to stick your repositionable fabric sticker to is clean and dry, then remove the backing paper and apply. Your sticker can be carefully peeled off without leaving sticky residue and can then be reapplied. Perfect for temporary displays or for patchwork templates.

Washing Information

These fabric sheets are water-resistant but not washable, they can be wiped clean with a damp cloth.
