

Inkjet Peel & Stick Cotton

Non-washable fabric for inkjet printers

Print directly onto these 100% cotton sheets using a top-loading inkjet printer. The fabric sheets have a paper backing to help them feed through your printer smoothly.

They are so simple to use; print onto them as if printing normal paper, then peel off the backing paper to reveal the adhesive coated underside of the cotton and apply to your chosen surface. Perfect for when you want to apply printed fabric to a surface but sewing or ironing wouldn't be appropriate.

Instructions

Do not attempt to remove or reposition the backing paper prior to printing.

Step 1 - Choose your design and resize it to fit your fabric sheet

Step 2 - Place the fabric sheet into your printer feed tray. Make sure it is straight and that you will be printing onto the fabric side of the sheet. Set your print quality to 'Photo Quality' or similar, leaving the paper type as 'Plain Paper' or similar. Select the correct paper size, then print. If the fabric catches on the side of the printer whilst printing you can use your finger to gently encourage it back into the correct feed position

Step 3 - Leave your printed sheet to dry. If you wish to cut out your design, do this before removing the backing paper

Step 4 - Make sure that the surface you want to stick your printed cotton to is clean and dry, then remove the backing paper and apply. Rub firmly over the entire surface of the cotton to ensure it sticks. Peel & Stick Cotton will adhere to almost all surfaces but will stick better to smooth surfaces than to heavily textured surfaces.

Washing Information

These fabric sheets are water-resistant but not washable, they can be wiped clean with a damp cloth.
