

# Systemic Treatment

## Take home points

- The term “chemotherapy” refers to many different types of anti-cancer treatment (systemic treatment).
- Systemic treatment can be taken by mouth (PO), injected through a vein (IV), injected into the skin (SQ), or injected into the muscle (IM).
- Systemic treatment can be given on many different schedules, individualized to each patient.

### What should I ask my doctor?

- Do I need systemic treatment?
- How will the medication be given and how often?
- What is my treatment plan?

### Other questions I have...
