

# HOW TO ADJUST

embark™  
Adventure Harness

## 1 Extend Straps - Make Harness Bigger

To get the best fit, we recommend extending straps to its maximum length first then tightening to correct fit.

### Neck Straps

- \* Pull the neck slider away from the logo bringing it closer to the front lead attachment point.
  - Do this by holding the strap in one hand and moving the slider with the other.
- \* Ensure you slide through the guide loop if needed.
- \* Repeat for second strap.

### Chest Straps

- \* Unbuckle the chest strap.
- \* Move the slider towards the buckle leaving 1 inch of gap between buckle and slider for easy adjustment later.
  - To ensure maximum extension, there should be no excess strap coming from slider. Please see below.
- \* Repeat on second strap.

## 2 Tighten Straps - Make Harness Smaller

Test on your dog to gauge adjustment. Logo should be on your dogs back. Tighten accordingly.

### Neck Straps

- \* Pull sliders towards logo.
- \* Pull through the guide loop if required.
- \* Repeat on second strap

### Chest Straps

- \* Hold the slider with one hand & pull down on the strap as per below.
- \* Adjust until reduced to size and repeat on second strap.

### Chest Strap Minimum Position

- \* If you need to go smaller, push the strap through the slider as below to reach minimum size.

Try it on your dog to see how it fits & make additional adjustments if necessary.
