

The "S" Pod

Shatterizer's NEW Ceramic Oil Coil

The "S" Pod is intricately made for high end oils #VapeFamily!

- Inside heating element is ceramic made with a 510 thread
- Encased with borosilicate glass, designed for the fullest flavour
- Engraved lid with grooves for ease of use, refilling and cleaning
- Compatible with all Shatterizer batteries and Shatterizer original globe tops
- Reusable, refillable and disposable, lasting several weeks
- Gauge replacement time by flavour: wick will change taste
- Replacement "S" Pod coils are available in convenient 5 packs

*NOT compatible with labelled coil caps for QDC and CTECH coils,
or DabTabsEdition glass top*

"S" Pod Instructions:

- Unscrew the lid from the borosilicate glass coil very carefully.
- Be gentle holding the coil, the "S" Pod is made of borosilicate glass.
- Hold the opened coil in one hand upright, fill the coil with the other.
- Only fill the coil until you reach the top of the "S" logo.
- Coil holds approximately 10 ml or a gram of oil, do not overfill.
- Screw lid back on coil carefully, making sure it is sealed securely.
- Always use the lid and keep the lid on coil to prevent spillage.
- Keep coil vertical and upright at all times.
- Ensure 3 O-rings are in place: inside lid, on top of vertical centre tubing and at coil base.
- Allow liquid to saturate coil and wick for at least 15 minutes before first use.
- Soaking the coil before use is very important for taste quality.
- Thinner oils take less time to saturate the wick and thicker oils will take longer.
- It is best not to use extremely thick oils.
- Start on the lowest temperature setting "RED" to gauge vaping viscosity and flavour.
- Do not use coil without lid, or vape without Shatterizer original globe on top.

TO CLEAN: Turn off Shatterizer and unscrew coil. ONLY wipe outside lid and outside of coil with alcohol, to remove stickiness or residue. DO NOT submerge or soak "S" Pod in alcohol.

Use VAPE-ABLE oils ONLY - DO NOT vape with EDIBLE oils!
