

RB Components / Sprinter Van Side Ladder

General Notes

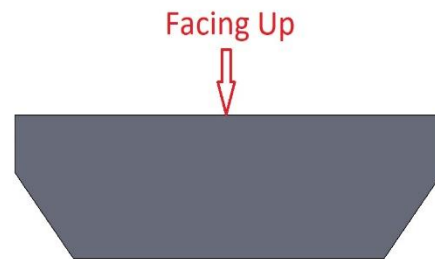

- Please read all instructions thoroughly before starting installing this product.
- RB Components sells two types of side ladders (straight & curved to fit wheel well). Both ladders install exactly the same.
- Factory OEM roof rails need to be installed prior to side ladder installation.
- Mounting hardware included.

Tools Needed

- 7/16" socket
- 3/32" allen wrench
- 9/16" socket

Installation Instructions

- 1) Remove the ladder from packaging and locate the hardware packaging. Within the hardware packaging you will need to locate the "Roof Rail Slide Hardware" **#61999-64-09-04-01**. For proper installation remove the black end cap and slide in the aluminum mounting bracket. Take note that the bracket can only be installed one way.

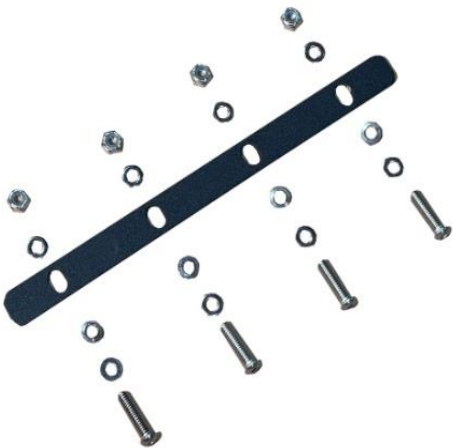

- 2) Slide the brackets to the general location in the roof rail where you want to mount the upper part of your ladder. Using the angled mounting bracket supplied in the kit. These will be used to mount the ladder to the OEM roof rails. Align the carriage bolts with the button head of the bolt facing out as shown. We just want to lightly mount the upper part of the ladder as it will make it easier when mounting the lower part of the ladder to the van.

RB Components / Sprinter Van Side Ladder

- 3) With the upper part of the ladder mounted (lightly as we will go back and tighten once the lower part of the ladder is secured) the next step is to align the ladder making sure it is in the exact spot you desire. The lower part of the ladder will sit up against the seam of the van. Mark the 4 mounting holes and drill these out. Next using the button head screws to mount the lower part of the ladder to the seam of the van. On the back side use slide over the screws the backing plate and fasten to the van with the nylon locknuts provided.

- 4) With the lower part of the ladder mounted in place go back to the top mounts and firmly tighten all hardware. Installation is complete.

***Note: RB side ladders are also compatible with RB roof racks by mounting underneath the roof rack as shown.

Installation is complete:
