## Before you begin: confirm the correct size of your print

Measure the bar below to make sure it measure exactly 3 inches. If it does not, make sure
page scaling is set to "none" on your print dialog box, and that you are printing at full size.

## Option 1: Use cut out sizer to measure finger.

Cut out the ring sizing guide below. Starting with the flat end on the finger, wrap the arrow around until it fits snugly. The number closest to the arrow point is the ring size. Hash marks represent half sizes. When in doubt, always use the next largest half size.

## Option 2: Match a current ring

Place a ring that fits the finger to be sized over the circles below, matching the inside edge to find the correct size. If the ring falls between two sizes, use the larger one.

## Option 3: Use a string

Wrapping a string around the finger and marking or cutting it to the perfect fit will find the ring circumference. Use the chart below to convert the circumference to a ring size. When in doubt, choose one half size larger.
