## HPS SPECTRUM

## MH SPECTRUM

# HOW TO ASSEMBLE

**STEP 1.** Use a clean cloth when handling the bulbs to prevent oils from your skin damaging the glass surface. firmly install the bulb into the Lamp fitting.

**STEP 2.** Connect the hanger to the top of the lamp shade, you may need to bend out the hanger top located at the top of the shade.

**STEP 3.** Ensure you hang the shade off a secure fixture to prevent the possibility of the lamp fitting falling and causing damage.

**STEP 4.** Ensure when fixing your ballast in place that you position it in a well-ventilated spot to allow for the passive cooling of the fangless ballast.

**STEP 5.** We recommend using the MH Bulb for your Vegetative cycle and then changing to your HPS Bulb for Flowering, by fixing the light to a height of 45- 50cm above the top of your plant will give you maximum spread and sufficient light intensity.
