

⚠ WARNING

1. Turn power off before inspection, installation or removal.
2. The installation should be performed by qualified electricians or lighting technicians.
3. Before conducting any installation, maintenance, or removal, disable all power to the luminaries and wait until the fixture cool down.
4. Do not touch the fixture while it is in service.
5. If there is any problem with the fixture, DO turn off power and DO NOT attempt repair unless you are a qualified technician or the customer service member.

Wall Mounting

1. Place mounting section of fixture onto desired mounting surface, mark and drill holes for mounting.
2. Mount the fixture with bolts provided. Install the two bottom screws first. Place the fixture on the two bottom screws and install the top screw. Tighten the top screw first and then tighten the remaining screws.
3. Make wiring connections in the fixture. (White to Neutral lead, Black to Line lead, Yellow Green to Ground lead)
4. Put the cord protection bracket back on the fixture and fix it with screws provided.
5. Plug the twisted photocontrol or shorting cap into photocontrol receptacle.
6. Installation is completed

Arm Mounting

1. Install wall mounting bracket onto the wall with screws provided.
2. Insert arm into mounting bracket and secure it with carriage screws.
3. Feed supply wires through arm and make wiring connections in the fixture.
(White to Neutral lead, Black to Line lead, Yellow Green to Ground lead)
4. Secure the fixture on the arm with fitter clamp and screws provided.
5. Plug the twisted photocontrol or shorting cap into photocontrol receptacle.
6. Installation is completed
