

WEV™

TOILE

barbican

Discover the **Wēv™ Icicle**. A sliver of pure dazzling light, the **Icicle** is a brilliant 1" diameter glass tube wrapped in fiberglass strands. In its classic white form, it is a high output fixture and is able to provide enough light to be the primary source in a space. Use colour and other embellishments for more decorative applications.

Part of the **Wēv™ Collection**, the **Icicle** uses 3D printing techniques which provides consistency both in finish and quality.

As a lightweight pendant, the **Icicle** can be suspended by only a power cord for most lengths, which range from 4" - 60". With a palette of 20 standard colours varying from vibrant to pastel, along with optional colour matching, the **Wēv™ Icicle** allows the brilliance of ice to sparkle in any shade.

Design artistic or geometric configurations using specialized connectors, or create clusters in different lengths to form a unique focal point. As a washable fixture, it's perfect for retail and hospitality environments. Low-cost solutions are available, visit **www.barbican.ca** for more information.
