INSTALLATION INSTRUCTIONS

Pre-Installation Guidelines

All In Ground fixtures must be installed to drain water away from the fixture. We recommend using pea gravel or sand as this will allow for superior drainage.

1 DIG HOLE & PLACE WIRE

GROUND INSTALL

- Dig hole(s) at the location of each fixture. Remove enough soil to install fixture allowing 8" of pea gravel or sand below & on the sides of fixture for drainage.

Recommended

Dig trench for flexible conduit or PVC running to the fixture. This will allow you to easily service the fixture.

- Feed your low voltage cable from the main line to where you are placing your pour sleeve.
- Place pour sleeve into the hole.

2 FILL HOLE

- Fill hole with pea gravel to ensure proper fit and drainage.

Concrete Install

Fill pea gravel allowing 2" for concrete pour. Pour concrete using standard masonry techniques.

3 SECURE WIRE CONNECTIONS & TEST

- Cut PVC sleeve to size. Allow enough length for sealed wire connection.
- Connect your low voltage cable from your main line to the fixture core using silicone filled wire connectors.
- Install LED lamp (LED MR8 or LED T3).
- Test to make sure your fixture is receiving power prior to the next step.

4 SEAL CORE & INSERT TO SLEEVE

- Once the fixture core is wired, place into the pour sleeve.
- Power your fixture.
