5 shielding options – 2 different sizes*

CSS – Cul-de-sac shield

FSS – Front side shield

LSS – Left side shield

RSS – Right side shield

HS – House side shield

*16 LED module options shown, 20 LED module also available

Put light where you want it, not where you don't

Put an end to trespassing

- Choose from 5 configurations in 2 sizes
- Select as an option for factory installation
- Order as an accessory and just clip on in the field
- Prevent unwanted light trespass

Light trespass can be a huge concern with solid state lighting technology. Bright lighting is great, but if you can't control it properly, it can create major problems. Communities want their streets to feel secure, but residents don't want those same lights keeping them awake at night.

Lumec has developed a broad range of shielding solutions for our Roadway product families to help alleviate these issues. These low-profile unobtrusive shields will not impact your fixture's appearance, EPA, or weight. They can be factory installed as options, or you can order them as accessories for easy clip-on installation in the field. There are 5 configurations to choose from for both 16 or 20 LED light engines.

See the product selection to the right and neighborhood illustration inside for a complete overview of the choices available and how they work.

Products compatible with these shielding options:

Lumec RoadFocus cobra head
Lumec RoadStar cobra head
Lumec MiniView cobra head

Choose the option that best suits your needs

Light gray curve behind all shielding options indicates standard distribution with no shielding.
