

Spectrum King LED Remote Power System

Spectrum King LED is proud to be partnering with Artesyn Embedded Technologies to provide SKLED customers with a Configurable Intelligent High Power System:

This power system provides accuracy, resolution and stability as a programmable scheduling, voltage and current source.

Avoid power spikes & surges and keep your peace of mind

The power rack houses EMC filtering and digital front-end power factor correction (PFC) circuits, input/output connectors and related hardware.

The modules can be connected in series or parallel, while achieving high accuracy voltage and current sharing.

The iHP has flexible input and can take 180v – 528v single or 3 phase power.
