

Yalp Store

For those LEGEND owners who wish to download applications for use on the device, the Yalp Store is your best outlet, and we've provided the file to download the Yalp Store at www.racingelectronics.com/LEGEND. With this application, you can download your favorite car diagnostic application or any of thousands of applications available through the open-source Android marketplace.

Yalp is a tool that downloads APK files directly from the Google Play Store. It runs on an Android device and doesn't require the use of a Google ID, it uses its own. It has a simple interface that allows you to search for applications to download or updates to downloaded applications. It was originally made available at F-Droid, a well-known website for safe open-sourced Android projects.

LEGEND is a proprietary device built primarily for use at race events with FanVision services or the LEGEND scanner and is not a Google certified device. On March 27, 2018, Google began restricting the access to the Google Play Store on all non-certified devices, however, this does not affect the use of Yalp.
