

## Harley Davidson 13-down Road glide speaker adapter instructions

The speaker adapters must be used in conjunction with the hogtunes speaker grills. They were designed to work on stock road glide fairings. They may need modifications to work on aftermarket fairings.

Start by removing the stock grills. Keep the 3 screws as you will re-use them. If you do not have them, any  $\frac{3}{4}$ " long screw will work.

Place the adapter along with the hogtunes grill together (as shown below) and use a screw through the adapter tab and grill to secure the assembly to the top post. Keep it loose at this time.

Move to the side tab and finally to the bottom tab. Tighten the bottom tab completely and move back around the assembly, tightening up each screw.

You may find it necessary to shave/grind off the bottom of the adapter where it meets the glove box pocket. This is not always necessary, but sometimes allows the adapter to fit better.

Position your speaker centered on the hole of the adapter and screw your speaker to the backside of the adapter. After both speakers are installed, fit your outer fairing and check for clearance.
