

Firmware v1.4 Release Notes

What's New in Firmware v1.4

As you know, our Redline 360c is a connected product, and because this platform heavily leverages software, it enables us to easily provide Wi-Fi firmware updates remotely.

Listed below are the product enhancements and new features available in firmware v1.4, which we believe will deliver an even better experience. Included in this release are:

Enhancements

- Arrow response time improved
- Improved signal processing on all bands. For situations where a single strong signal was showing up as multiple signals.
- Spec meter available

How to Get the Update

If you are taking advantage of the Wi-Fi connection in your vehicle or have access to Wi-Fi, you will be prompted for the update once it becomes available. If you are not able to access Wi-Fi, you can connect your Redline 360c to your computer via USB (<https://www.escortradar.com/pages/update-your-device>). There are two different links on the page depending on if you are using Windows or Mac OS.

Keep the Feedback Coming

We're eager to hear from you! Let us know how the new firmware is doing. You can email (radarfeedback@cedarelectronics.com) and we'll review your feedback.
