ESCORT MAX 3

Firmware v1.2 Release Notes

What's New in Firmware v1.2

Listed below are the new features and product enhancements available in firmware v1.2. Included in this release are:

- Mac OS for MAX 3 firmware updates are now available on Detector Tools

Enhancements

- Improved AUTO Mode sensitivity. Increased sensitivity to K-band over 15 mph.

  - To reduce alerts at low speeds, use Cruise Alert settings in Escort Live to ignore alerts under certain speed thresholds (e.g. Cruise alert set to 25 mph will ignore K-band alerts under 25 mph).

- Fixed an issue in the ESCORT Live app where live alerts freeze on the screen of the radar detector. The new version will clear the alert and speed limit when the app loses its location for 10 seconds or more.

  - iOS: v3.1.27
  - Android: 3.1.60

How to Get the Update

The new software update is available now. You can download Detector Tools at https://www.escortradar.com/pages/update-your-device and connect your MAX 3 to your computer via USB.

Keep the Feedback Coming

We want to keep hearing from you! If you have feedback or suggestions on how to make the MAX 3 even better, send an email to radarfeedback@cedarelectronics.com.
