ESCORT® MAX 3

MAX 3 Firmware v1.6/v1.3 (North America) & v1.3 (International - 2023) Release Notes

What's New

Cedar Electronics is announcing the release of version 1.6/1.3 firmware for the MAX 3 (North America) and version 1.3 firmware for MAX 3 (International - 2023). We have developed several key improvements in this release which should continue to improve your experience with your MAX 3. Versions differ for newer models available in 2023 (microprocessor change - no performance change). There will be a forthcoming update for the MAX 3 v1.2 International for products released prior to 2023 coming soon.

Enhancements common to both North America and International units:

- Added Mesta detection

- Full Mesta/Gatso/MTR support for Live Alerts: Drive Smarter (iOS) & ESCORT Live (An update for an Android fix for MESTA toggle will be available in the next week or two)

- Fixed compatibility issue with ZR5 and ZW5 laser shifters

- Fixed an issue with Jam-To-Kill. If set to Shift4, and you manually disabled shifters, it would momentarily re-enable the shifters

- Added frequency read-out and improved meter ramp-up for MTR-CT

How to Get the Update

Downloads are available directly to your MAX 3. Manual downloads are available using a USB connection with your PC or Mac using our website (Update Your Device (escortradar.com)). If connecting through Detector Tools Pro, the server will determine which version of firmware needs to be updated. If you have any questions, please contact our customer care team at 800-543-1608.

Keep the Feedback Coming

We want to keep hearing from you! If you have feedback or suggestions on how to make the MAX 3 even better, send an email to radarfeedback@cedarelectronics.com.
