

## **Redline Ci 360c Firmware v1.2 (North America) & Redline Ci-c v1.3 (International) Release Notes**

### **What's New**

Cedar Electronics is announcing the release of version 1.2 firmware for the Redline Ci 360c (North America) and version 1.3 firmware for Redline Ci-c (International). We have developed several key improvements in this release which should continue to improve your experience with your Redline Ci products.

New firmware updates will be available beginning this week for the Redline 360c (Monday), MAX 360c MKII & MAX 360 MKII (Tuesday) and MAX 3 (Wednesday).

### **Enhancements common to both North America and International units:**

- Improved speed-based sensitivity in Auto modes
- Improved CAS rejection
- Improved K band instant-on and overall response time
- Improved sensitivity in Ka-band

### **How to Get the Update**

Downloads are available directly to your Redline Ci connected products. If you are taking advantage of the Wi-Fi connection in your vehicle or have access to Wi-Fi, you will be prompted for the update once it becomes available.

Manual downloads are available using a USB connection if you are unable to utilize the WiFi update directly with your device. For this option, we recommend having your dealer complete the firmware update. If you have any questions, please contact our customer care team at 855-339-3311.

### **Keep the Feedback Coming**

We want to keep hearing from you! If you have feedback or suggestions on how to make the Redline Ci 360c and Redline Ci-c International even better, send an email to [radarfeedback@cedarelectronics.com](mailto:radarfeedback@cedarelectronics.com).
