Passport SRX Installation Manual

**Front Radar Receiver**

1. Determine the best location for the radar receiver. The best location is typically under the bumper, or inside the front grill of the vehicle. For the best radar performance, install the radar receiver horizontally, with a clear “view” of the road.
2. Using the built-in mounting holes on the receiver, or the supplied right-angle mounting bracket, mark location. Drill pilot holes in the vehicle if necessary.
3. Mount radar receiver using the supplied hardware. (If right-angle mounting bracket is used, secure radar receiver to the right-angle bracket first, then install bracket with radar receiver to the vehicle.)

**Radar Receiver Cable**

1. Connect the receiver cable to the receiver.
2. Route cable to firewall, and secure with zip-ties (included).
3. Route receiver cable into the vehicle’s interior. If there is not a suitable opening, drill a 13/32” or 7/16” hole.
4. Pull cable through firewall, and plug connector into the jack labeled “Front Radar” on the Interface.
5. Pull grommet (located on the receiver cable itself) through the firewall to seal the hole.

**Laser Shifter Cables**

1. Route Laser Shifter cables to firewall, and secure with zip-ties (included).
2. Route both Shifter cables into the vehicle’s interior. If there is not a suitable opening, drill a 13/32” or 7/16” hole.
3. Pull cables through firewall, and plug connectors into Y-adapter.
5. Pull grommet (located on each cable) through the firewall to seal the hole. Use silicone sealant (not supplied) if necessary.

**Interface**

1. Install Interface under the dash using supplied zip-ties. DO NOT MOUNT IN ENGINE COMPARTMENT.
2. Connect black wire (−) to ground, and red-striped wire (+) to a switched 12-volt supply. (If Passport is left in the “on” position, it will automatically power on and off with the ignition.)
3. Radar receiver, front Laser Shifter, rear Laser Shifter, and Display Controller all plug into the Interface. (Be sure to plug all cables into the correct labeled jacks.)

**Remote Mute/Volume Adjust**

2. Clean surface area.
3. Remove paper backing on the back of the button, and press onto surface.
4. Route cable and plug into jack marked “Mute” on Interface.

**TEST**

After all components are installed correctly:
1. Turn Passport on by rotating the volume control knob.
2. Turn vehicle’s ignition to the “on” position.
3. Passport will cycle through a startup sequence.
4. If any error messages come up, see page 21 of the Owner’s Manual for details.
