42" Dia	36" Dia	250k	~ 147 lbs	
48" Dia	36" Dia	250k	~ 192 lbs	

****Please note:** The estimated quantity calculated under the Fire Glass Capacity column is based on a fire pit with a 2" depth. To determine exactly how much fire glass is needed, it is highly recommended to measure your fire pit's opening. For more information, please reference the Fire Glass Calculator page at <https://starfiredirect.com/pages/fire-glass-calculator>.

****Please note:** When using fire glass in a propane gas fire feature, the burner should not be covered in no more than a 1" layer of fire glass.
