DRÄGER-TUBES MEASUREMENT-SYSTEM

Short-Term Dräger-Tubes®

Dräger-Tubes are an easy to use and cost effective way to measure toxic gases and vapors in the workplace. More than 200 different Dräger-Tubes are available to accurately make spot measurements for over 500 gases and vapors. Dräger-Tubes are used in conjunction with either a manual or automatic sampling pump using individual Dräger-Tubes or special 5 tube sets for simultaneous measurement.

Dräger Pumps and short-term Dräger-Tubes® are not interchangeable with other manufacturers' pumps and detector tubes.

DRÄGER SIMULTEST SETS

The simultest sets consist of 5 tubes in a rubber holder which have been calibrated to operate as a single sampling unit. The sets are designed for specific applications such as determination of organic and inorganic chemicals, chemical warfare agents, fumigants and clandestine drug lab chemicals.

DIFFUSION (PASSIVE SAMPLING) TUBES

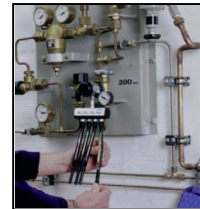

Get on-site measurements of 8-hour exposures with the Dräger Diffusion Tubes. This gas and vapor measurement technique provides a quick, simple, and on-site means to determine employee exposures. Unlike Short-Term detector tubes that require a pump for operation, Dräger Diffusion Tubes rely on natural movement of the gases and vapors to enter the tube and cause a color change. Simply read the indication on the graduated scale (ppm x hours) and divide by the amount of hours the Dräger Diffusion Tube has been in use for a TWA measurement. No waiting, no analysis fees, no laboratory services, no turn-around time; just on the spot measurement. The Dräger Tube Holder allows you to place the Dräger Diffusion Tube in the breathing zone of the people being monitored or in the suspected areas.

DRÄGER AEROTEST KITS

Dräger-Tubes® are widely used to measure the quality of compressed breathing air, the purity of medical gases, contaminants in process gases, and impurities in technical gases. The Aerotest Kits facilitate these types of measurements by reducing the pressure of the sample to a level at which the Dräger-Tubes® can accurately operate.

Dräger X-act 5000 Basic Automatic Tube Pump

The Dräger X-act 5000 Basic all-in-one, automatic pump is used in conjunction with the colorimetric Dräger-Tubes and simultest sets for taking measurements on the spot with direct reading results. The pump may be programmed to take from 1 to 200 strokes enabling measurements into the ppb range. The X-act 5000 Basic also features a constant flow mode for use with sorbent tubes like charcoal and silica gel at flow rates over the range of 0.1 to 2.0 L/min.

CIVIL DEFENSE SIMULTEST (CDS) KIT

Are you prepared to respond to a terrorist attack involving the use of chemical weapons? In today's world, immediate and accurate detection of toxic chemicals is crucial. The Dräger CDS Kit uses specially developed Dräger-Tubes® (the same tubes used by NATO forces) in a quick and easy to use kit. Two Civil Defense Simultest Sets measure a wide range of chemical substances including nerve, blood, lung, and blister agents.

DRÄGER CLAN LAB SIMULTEST KIT

The illegal manufacture of methamphetamine is a serious problem in North America. Dräger has developed a Simultest Set with detector tubes that quickly confirm the presence of chemicals commonly associated with three principal methods of methamphetamine production. This allows law enforcement and first responder personnel to make fast decisions on the need for respiratory protection.

Dräger Pumps and short-term Dräger-Tubes® are not interchangeable with other manufacturers' pumps and detector tubes.

DRÄGER AEROTEST KITS

Dräger-Tubes® are widely used to measure the quality of compressed breathing air, the purity of medical gases, contaminants in process gases, and impurities in technical gases. The Aerotest Kits facilitate these types of measurements by reducing the pressure of the sample to a level at which the Dräger-Tubes® can accurately operate.

DRÄGER FLOW-CHECK

Air current directions and flow rates are very important to gas detection. The visible plume of non-toxic, non-reactive smoke generated by the Dräger Flow-Check allows you to actually see the direction, dispersion, and relative speed of the air currents in an area. Knowing how the air is moving, you are better prepared to accurately measure gases. This smoke can also be used to detect air leaks around doorways or other fixtures.

Dräger Flow-Check is also popular for checking the effectiveness of ventilation ducts, pressurized rooms, fume hoods, vapor extractors and other air movement equipment. These functions assist those in the HVAC, hospital laboratory, and manufacturing industry sectors.

CHIP-MEASUREMENT-SYSTEM (CMS)

Dräger CMS

The Dräger CMS is a portable system based on colorimetric reactions for short-term or spot measurements of known gases and vapors. The system consists of a substance-specific chip and an analyzer, which displays the measurement result as a digital readout. The calibrated chip contains 10 measurements, and the analyzer is equipped with an integrated data recorder.

X-zone® 5500 Monitor

The X-zone® 5500 is a stand-alone, wireless area monitor which is easily transported and quickly set up to provide a safe environment in any potentially hazardous area. Its sensing mode and operational mode is provided by the high performance X-am 5000, 5100 and 5600. An integrated pump version allows for continuous monitoring of confined spaces and locations which are difficult to access, even from a distance of up to 150 feet.

NOTE: The X-zone® 5500 and accessories are only available for sale from designated Draeger Distributors. Please contact your local Draeger RSM or Draeger's Customer Service group at 1-800-922-5518 for more information.

X-am 8000 Multi Gas Monitors

The Dräger X-am 8000 is a smart and lightweight 1-7 Gas Detection Instrument, which is specially designed for the requirements of clearance measurements for confined space entry and leak search. It is equipped with an internal pump, and by combining a broad combination of infrared, catalytic, PID and electrochemical sensors, it can be configured for many different applications.

Dräger X-pid® 8500

The selective PID gas measurement device is ideal for users who frequently test for hazardous toxic substances. Benzene, butadiene and other volatile organic compounds (VOCs) are carcinogenic even in the smallest concentrations. Selective measurement is necessary because other gases and vapours are often also present.

The Dräger X-pid gas measurement device allows for short test times and laboratory-quality results.

REPLACEMENT TOXIC AND OXYGEN SENSORS FOR PORTABLES

DrägerSensors provide superior value, with long term operation and fast, accurate readings. Our O₂, CO and H₂S sensors have warranties of up to 5 years. Dräger offers the broadest line of toxic gas sensors in the industry.

REPLACEMENT CATALYTIC COMBUSTIBLE SENSORS FOR PORTABLES

Dräger catalytic sensors measure almost any explosive gas quickly and reliably. The sensors have over range protection in case of high gas concentrations, which burn out many competitive sensors.

Infrared (IR) Sensors

IR sensors are available for hydrocarbon and carbon dioxide detection. They are completely immune to poisoning, operate in environments with low or no oxygen, and Can be configured with multiple calibrations. Smart IR sensors are available for the X-am 7000 in both 0-100% LEL and 0-100% Vol.CO₂ detection ranges.

X-plore Twin Filter System Facepiece

X-plore 5500 is a dual cartridge full face mask respirator that is available with a plastic or stainless steel lens frame. It is compatible with the X-plore line of cartridge filters, and offers the user a large 180° field of view, and optimal protection.

X-plore 3300 is an economical half mask respirator that offers high protection for a low cost. The low profile design and three sizes ensure that users don't have to sacrifice comfort for price.

X-plore 3500 is a deluxe half mask respirator with an extra soft mask body and drop down feature. The design makes this mask ideal for harsh environments and long duration use. X-plore 3300 and 3500 are both compatible with the X-plore line of cartridges and available in S, M, L sizes.

PARAT NG Series Hood with Integrated Canister

Dräger PARAT® Escape hoods are designed to be easily donned and protect users from toxic industrial and fire-related gases, vapors and particles for at least 15 minutes. Users are ready for escape in three steps: 1) Open the case - seal is broken, filter plugs release, and canister deploys automatically; 2) Put on the hood - internal head harness and elastic neck strap adjusts the hood to fit automatically; 3) Escape

Portable Compressed-Air Sources

The Dräger Handy Pak and Rescue Pak provide a transportable source of compressed breathing air. While the Handy Pak is lightweight and easy to carry, the Rescue Pak has wheels that make it even easier to transport. Both systems can supply up to four respirators from two SCBA cylinders (2216 or 4500 psi) and are equipped with a low-pressure warning whistle. The Dräger KKart II delivers compressed breathing air for confined space entry, Haz-Mat, and other industrial applications that require extended air supplies.

Governmental SCBA 2013 Edition

The Dräger Hybrid System (DHS®) 7000, built around the new Dräger Hybrid Respirator (DHR®) 7000, which has NIOSH CBRN approval as an APR, and as a PAPR No adaptor needed. The PSS 7000 has been stripped of several of its visual and audible alarms to help prevent your position from being compromised. The system also comprises Dräger's Cap 1 Canister and C420 PAPR.

BGComm Communication System

The BGComm communication system from Draeger Safety offers advanced communication flexibility when using the BG-4 Closed Circuit Breathing Apparatus. Incorporating the Radio Interface that is also the mounting bracket for the detachable Voice Amplifier, Draeger's BGComm system offers distinct speech clarity and volume. The mounting bracket attaches to the face piece and provides the contact point for the internal microphone. The internal microphone/mounting bracket serves as the platform for all configurations: Voice amplification, radio interface or both.

Features:

- Waterproof internal microphone
- Waterproof mounting bracket
- Versatile: voice amplification, radio interface or both
- NIOSH, NFPA and UL approved

Dräger Fire Training Systems

Dräger Swede Survival - Class A Fire Training Systems

Dräger Swede Survival Systems are a very cost effective way for any department to build the confidence and knowledge of both new recruits and seasoned firefighters. These wood-fueled (Class A) live fire training systems are available in multiple configurations, including flashover development observation trailers, customizable interior attack trailers (AFG Grant Eligible), backdraft simulators, garage formations and multi-story buildings. Every purchase of a Dräger Swede Survival System includes a 2-day "Train-the-Trainer" Certification Training workshop, which is conducted by experienced Fire Training professionals.
