

## How to use the size guide:

1 - Print this page at **100%** sizing. \*Do not scale the image down to fit your printer, the sizing will not be correct.

2 - Cut out the 5 sections.

3 - Use tape to join the 5 sections together, one by one. Line up the edges with each other as shown below. \*Do not overlap the pieces.

4 - Carefully wrap the size guide around your chest, just below the arms.

5 - The line on section one, labelled "0", will fall in one of the size areas... This is your size!

### Additional sizing tips:

- Each size is labeled with "small adjustment | large adjustment". If you fall in the smaller half of the size, it is likely that you will want to run your brace on the smaller of its 2 settings, and if you fall in the larger half of the size, your brace may be better fitted with the larger adjustment setting.

- If you fall perfectly inbetween 2 sizes, you may be able to go either way. For kids that expect to grow quickly, we suggest opting for the larger size. For adults we recommend the smaller of the 2 sizes. The use of straps is also very highly recommended for all users.
