

## NEWS

IT'S A  
SALT WATER  
POOL!!!

You mean a  
chlorine pool?

# Chlorine in your "salt water" pool

This meme is the best thing I've seen on the internet in a long time! Why? Because all commercial pools have chlorine, it's required by law.\*

The marketing people get away with having you *believe* salt water pools are chlorine-free because chlorine is not *added* to the pool, it's self-generated through electrolysis. Either way - it's still there.

[This video](#) is a short explanation of how the process works, but I don't agree with the statement at the end that the chlorine generated by electrolysis is less caustic; salt in the water makes everything appear "softer" than plain tap water.

\*The only variances currently are float (sensory deprivation) tanks and residential swimming pools.
