LEADS

J2-72

Forward facing guardrail mounted controls for efficient picking of small items or quantities

Optional dash mounted travel and mast controls for easy on, easy off operation

Ergonomic mini-mast brings loads up to waist height, maximum fork elevation 72"

Single stage I-beam channel mast lifts the operators to 48"

"J" IS FOR Joey

The Big Joe series of vehicles that helps companies access materials smarter, safer and faster.

Expand your number of low level pick faces. If the number of products you need to handle is continuing to grow, the best use of space in your facility is to go vertical. Just by elevating a worker a few feet, most companies can double the amount of items that can be selected close to the ground where efficiency is greatest. If your company is in retail, e-commerce, omnichannel distribution or has a need to rapidly pick small items or small quantities, the J2-72 may be the right tool for you to access more materials and get the job done.

Exceptional versatility. The J2-72 is designed for low level order picking, but drives like a compact 3 wheel forklift. With the use of the vehicle's mini-mast, the J2-72 can be used to pick orders to a pallet, skid, platform or tote and raise loads to waist level to reduce operator fatigue. Forward facing controls make it easy to stage and stack loads, to load take away conveyors in pick models, or to feed outbound conveyors in shipping areas. Simply put, the Big Joe J2-72 can do a lot for a small truck.

Load Capacity 1,500 lbs

Operator Capacity 300 lbs

Min. Turn Radius 57"

DASH MOUNTED LCD DISPLAY

with travel speeds settings, battery discharge indicator, hour meter, drive wheel direction indicator and on board diagnostics.

INDUSTRIAL BATTERY

COMPARTMENT with rollers is standard to support battery changes during peak periods or multi-shift operations.

OPTIONAL: 120 VAC Battery Pack

HIGH TORQUE AC DRIVE

The J2-72 is outfitted with a powerful AC powertrain that is both highly efficient and maintenance free making it a dependable and productive performer with travel speeds up to 4.5mph.

J2-126 /J2-144

Overhead guard with anchor, tether and harness included

Foot pedal activated pallet clamp to secure loads during operation.

Two stage I-beam channel mast lifts loads to 126" or 144" while operator is elevated an additional 6"

Forward facing guardrail mounted controls for efficient picking of small items or quantities

Go higher and pick more without need of a large machine. With the ability to lift an operator up to an additional 8 ½ feet, our taller J2 units can be utilized to access even more product while maintaining a very compact 34" wide chassis dimension. The J2-126 or J2-144 make a great equipment choice for areas where high storage density is required but floor space and ceiling elevations are limited.

Stop thinking backwards about forks first operation. The J2 series features forward facing controls to assist operators in seeing pick locations ahead of them while keeping their heads fully within the confines of the vehicle. When picking an order, operators can quickly grab items and continue on to the next storage location without need of constantly turning around or reorienting their body position. This unique control orientation is particularly beneficial for the handling of small order sizes or small items - as is often the case in e-commerce or manufacturing support roles. If your not picking large order quantities or large sized items, look forward to better order picking and a better fit with the J2-126 or J2-144.

Load Capacity 2,000 lbs

Operator Capacity 300 lbs

Min. Turn Radius 63"

OVERHEAD GUARD MOUNTED LCD DISPLAY with travel speeds settings, battery discharge indicator, hour meter, drive wheel direction indicator and on board diagnostics.
