

Masonry 750 The Little Beast

Cut through multiple blocks at once, even extra large retaining wall blocks.

Cutting Blocks just got a lot easier! The Masonry 750 allows the operator to cut 8" and 10" blocks in a single pass – without the added hassle and effort of a foot pedal. The powerful **7.5 h.p. electric motor** combined with the 30" blade delivers 12" of cutting depth. Whip it through blocks, pavers, and pre-cast concrete products with ease. The frame and cutting tray are hand fabricated **heavy duty steel**, while the ergonomic design allows the operator to load up the saw with a lot less effort than our competitors' saws. **Cut "mucho más" material in a day... Guaranteed!**

VERSATILITY

Should it be necessary to **make a plunge cut** just grab the tilt handle and ease the blade into the material. The cutting head pivots on sealed bearings, making plunge cuts is smooth and controlled.

QUICK SPECS	MASONRY 750 Little Beast
Blade diameter / Blade shaft diameter	30" / 1"
Max cutting length (w/plunge)	18" / 27"
Maximum cutting depth	12"
Motor rating	6 h.p. 220v, 1ø or 7.5. h.p 220v, 3ø
Blade speed	1700 r.p.m.
Weight (crated)	440 (495) lbs.
Water pan capacity	9 gal.
Self-Priming Centrifugal Pump	3 g.p.m.
OPERATING DIMENSIONS (palletized)	
Length	60" (66")
Height	33" (36")
Width	62" (68")

EASE OF USE

The Masonry 750 is designed to make it **easier to move the blocks on and off the saw**. The lower profile allows the operators to get a lot more done in a day.

QUALITY

The box steel frame is very **rigid yet light** for a saw of this size. Proven design techniques combined with high quality steel makes for one powerful and buffed Beast!

POWER

The 30" blade begins to spin very efficiently as the optional 7.5HP motor is equipped with an **electronic soft start system**.

PORTABILITY

The wheelkit and the **well engineered balance** of the saw allow it to be rolled around by one person. The Beast is also easily **handled by a forklift** as lift slots are welded into a frame.
