Intra Repiderma

Antibiotic-free skin and hoof protection spray
to heal, prevent infection & protect the skin

BENEFITS

- ✓ Heals wounds, lesions, hoof & skin problems
- ✓ Used for udder cleft dermatitis, foot rot, dehorning, naval care and more
- ✓ Chelated minerals penetrate the skin to promote healing from within
- ✓ Forms an adhesive seal which protects skin for at least 3 days
- ✓ Aerosol can works at all angles
- ✓ 80-100 applications per can

SAFE HANDLING & STORAGE

Flammable: do not store near potential sources of ignition.
Ensure spray does not come in contact with the eyes.
Intra Repiderma is intended for external use only.

KEY INGREDIENTS

Contains micronised chelated copper & zinc

APPLICATIONS

Shake can well before use.
Spray onto the surface of the skin for 3 seconds from a distance of 15-20cm, so the skin is evenly coloured.
Allow the product to be absorbed for at least 30 seconds.

FURTHER INFORMATION

Udder Cleft Dermatitis

A study carried out by Intracare on Dairy cows showed that using Repiderma on the mild udder skin cases every 2 days resulted in over 80% of cows fully recovering from Udder Cleft Dermatitis.

As a recommended treatment, clean and dry any affected skin and apply an even coat of Repiderma from a distance of 15cm every other day until there are no visible signs of Dermatitis.

Calf Navals

Iodine in a naval cup is often used to disinfect calves navals, however this process can lead to cross contamination, is messy and expensive.

The adhesive properties of Repiderma spray make it perfect for navals as it seals the wound whilst promoting healing from within.

Additional notes
