20L

Dilution Rate
1 litre per 1 tonne feed

HOW TO USE

Mix with grain or pellets before feeding. Alternatively, spray into feeder before adding feed.

Dilution rate: 1 litre of Quill Aniseed Oil Mix per 1 tonne of feed

FURTHER INFORMATION

How does aniseed work?

Aniseed contains anethole, an aromatic compound that is highly attractive to birds.

Pheasants, partridge & pigeons all love the smell of aniseed oil and when pre-mixed with feed, this attractant can be used to keep birds close to a specific feed source.

"Our secret recipe for Quill Aniseed Oil Mix will make sure that pheasants stay on a shoot and can even attract roaming birds"
