Tripod available  
separately

DEFRA-  
approved  
design

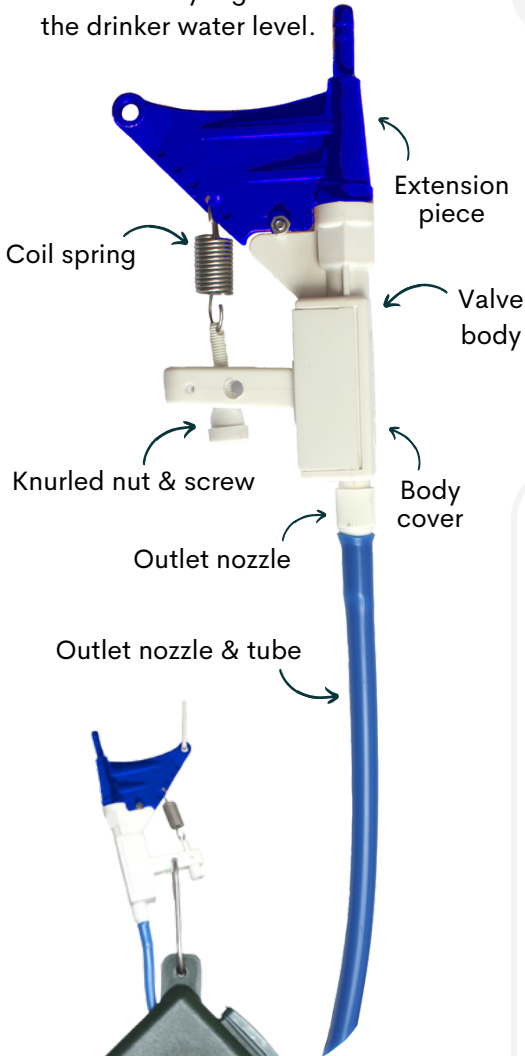

## BENEFITS

- ✓ Can be used **indoors or outdoors**
- ✓ The **ONLY** nipple system to oscillate during use - **reduces boredom & feather pecking**
- ✓ **Long-lasting & reusable**
- ✓ Nipples **reduce risk of cross contamination**
- ✓ Height can be easily **adjusted as the birds grow**

## Quill Auto-filling Valve

The Quill Auto-filling Valve is easier to set up from empty & automatically regulates the drinker water level.

### Quality materials

The Quill valves are hand assembled at our site in Dorset to ensure quality control.

All plastic parts are made in Britain from high grade virgin plastic.

## Quill Automatic Cut-Off Valve

Automatic cut off which reduces the risk of any spillages whilst in use should a drinker fall.

### Prevent the spread of disease

Birds must tip their heads back to swallow and will drip contaminated water back into open drinkers as they go to drink again from a low level.

Our nipple drinkers are designed at the perfect height for birds to tilt their heads back and drink easily with no chance of cross-contamination.
