These models feature IBC connecting pins AND our Magnetic connection system (magnets on bottom; metal plates on top) and are decorated with detailed prototype printing. JTC's 6-42-6 53' container has been tooled with two different fronts, and Five different door ends. This allows for many variations and paint schemes to match prototype pictures, including many Canadian based companies.

These Releases expected JULY 2020. \$33.95 per 2-pack

535046 NACS – NORTH AMERICAN CONTAINER SYSTEM

The North American Container System (NACS) is an Intermodal equipment program designed to facilitate the free interchange of domestic 48' and 53' containers between member railroads. NACS is an "unbundled" transportation product, meaning that transportation costs do not include equipment detention costs. In other words, the customer is responsible for detention charges when the equipment is not moving on a participating NACS railroad system. Members of NACS program include BNSF, CN, CSXI, KCS, NS and CP. NACS operated 1996-2006 (?)
