

# Product Overview

Isolator is the simplest way to run multiple controllers on the same irrigation system. It's the best defense to protect controllers from feedback, phasing and polarity issues. Isolator is quick and easy to install, requires no maintenance and prevents costly repairs and downtime.

## Why you need it?

Isolator will protect your controllers from interconnection issues when you have more than one controller on an irrigation system. It protects against:

- ⚡ Blown fuses
- ⚡ Polarity issues
- ⚡ Feedback
- ⚡ False start times
- ⚡ Blown controllers
- ⚡ Phasing problems

## Benefits

- Prevents costly repairs and downtime
- Protects your valuable controllers
- Eliminates time and hassle of troubleshooting system errors
- Built to last using the highest quality materials
- Can be installed to allow or prevent controllers from watering at same time
- One year full replacement warranty against defects
- Free U.S. based phone and online support
- Engineered for best in class durability and longevity
- Made in the USA

## Features

- Allows multiple controllers to operate on the same system
- Best defense against system failures
- No maintenance or programming required
- Easy to install and use
- Overbuilt by design for long service life
- Allows old mechanical and new digital controllers to work in unison
- Compatible with all 24VAC controllers
- Outputs up to 8 Amps
- Can be installed at controller or at pump location
