

Dish Doctor

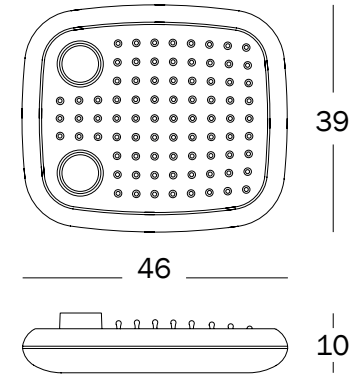

design **Marc Newson** / 1998

Dish Doctor: a dish rack born of the union of two shells with rounded edges in standard injection-moulded polypropylene. The dishes are placed among a host of stalks, also with a rounded shape and in a contrasting colour, among which the cutlery holders stand out and, rising up above the contour, give Dish Doctor the appearance of a ship's hull.

As Newson himself said: "I controlled every aspect of this design, even the packaging. We adopted fast prototyping, moving from 3D to tooling without any changes made. This dish rack is made in polypropylene like all objects of this type, yet Magis production standards are really high and the end result was fantastic!"

material /

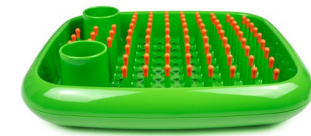

standard injection-moulded glossy polypropylene.
