

PLANETA - WIRE ROPE PULLER

PLANETA – ALUMINIUM ROPEMASTER

The housing is made of corrosion resistant lightweight durable aluminium die cast. This makes the hoist very robust and light enough to carry it around the job. We supply the puller complete with lever and spare overload protection pins, stowed conveniently inside the cap of the lever grip or carrying handle. The wire rope, wound on a reel with hook, is optional.

VERSATILE

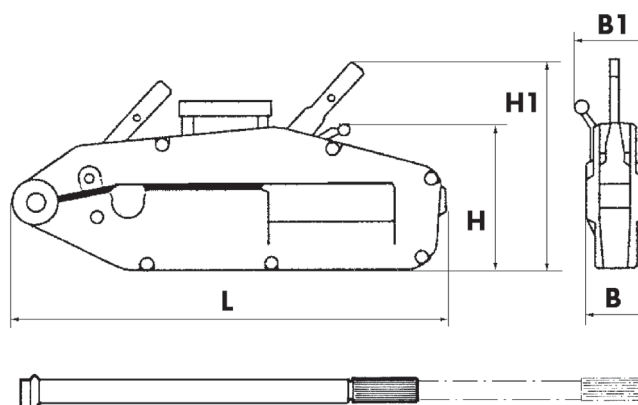

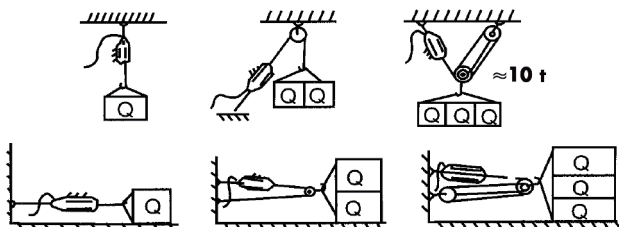

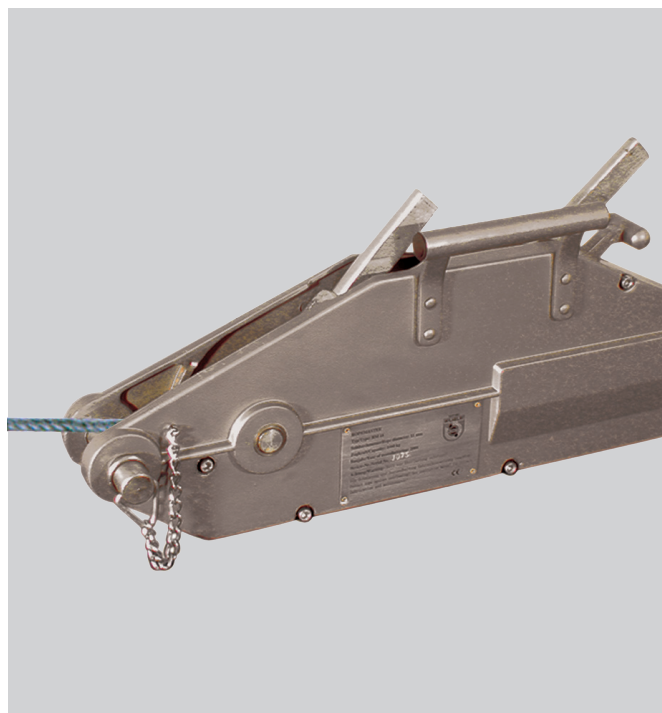

Cranes lift, winches pull, lever hoists span and tie. A PLANETA - ROPEMASTER is all in one! Four capacities up to 5.4 tons are offered and if you need more power, then wire rope blocks can multiply the force. See the picture below how 10 tons can be moved! Please ask us for sheaves.

SIMPLE OPERATION

The unloaded ROPEMASTER allows you to pull the rope through the body quickly and to the right distance. Now anchor your ROPEMASTER safely! The long rope provides lots of play. Put the long lever pipe on handle 1 for pulling, on handle 2 for lowering. Simply pump the lever. Whenever you stop, the load will be held safely. It's that easy!

OVERLOAD PROTECTED

Protection pins in handle 1 break if the load is too high. No more pulling or lifting is possible then. But the break function is still active. Just replace the pin quickly without unloading the puller.

SPECIFICATIONS
