

## Subaru Outback (2020+)

Version 1 & 2

Start by cleaning the area where the bracket will be installed. With rear door shut, hook and stick top bracket on rear door hatch following the spoilers curve as shown in **photo 1**.

**\*\*PLEASE NOTE\*\***

The re-designed top bracket /ladder you have received is not shown in photo 1 (but still attaches in the same location) We are working on obtaining updated photos!

Attach ladder to upper bracket in the provided slots( under the top of the ladder).It should slip right into place and lock in, as shown in **photo 2**

With rear door slightly open as to not allow top of ladder to fall forward, align bottom of the ladder parallel to the bottom of rear door. Attach bottom bracket, with provided screws, to base of ladder (over the lip of the bottom door hatch). The bottom of ladder will be a bit high but this is normal until you secure the bracket **as shown in photo 3**
