

#### Step 1

Lay book shape on table with perforated lines vertical. Weave one strip through slots of middle left section of book. From opposite direction, weave second strip through slots in middle right section of book, as shown.

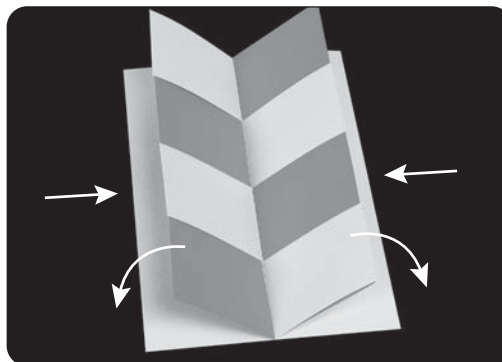

#### Step 2

After both strips are woven through slots, accordion-fold along perforations, so woven pages are folded inside of book.

#### Project Ideas

- Create field trip journals with a different aspect of the trip on each section.
- Write riddles or math problems on outside sections of the magic page, with answers on corresponding inside sections.
- Write geography questions on solid pages, and allow students to write or illustrate answers in magic section.
- Create "All About Me" books, allowing children to write or illustrate their unique characteristics in magic page section.

#### Step 3

Close book and then separate book's center woven pages to reveal hidden page!
