Smart Brew™ Automatic Tea Kettle

Making perfect tea is now simple and easy. Prepare any tea with pre-set temperatures for the most popular teas, or chose an exact temperature at which to brew. Two stainless steel steeping filters allow for use with tea bags or loose botanicals. Its Automatic Steeping feature allows users to program the amount of time botanicals are in contact with the water. A pump showers the tea above the water in the kettle body, preventing over-extraction. Auto-start prepares tea at the specified time and temperature, and Auto-off feature shuts it down if left unattended for over 60 minutes. Keep Warm feature automatically adjusts to 160 °F (71 °C) maintaining a desirable drinking temperature without burning the botanicals. Its generous 1.2 liter capacity, easy grip handle and lift off base (no cord to interfere with pouring) make it perfect for serving.

Removable power cord in markets outside of North America.

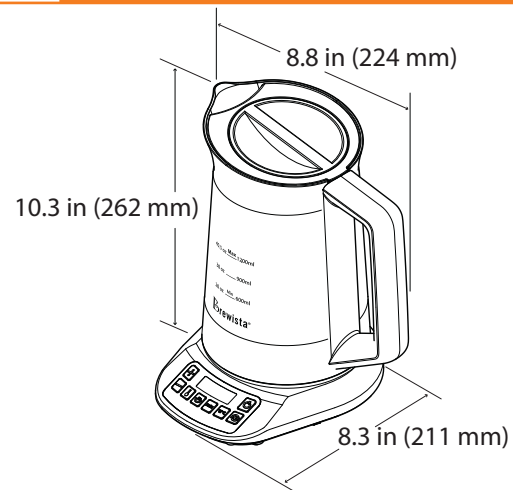

Smart Brew™ Automatic Tea Kettle

BATK12S01 series
