WILGER

Combo-Jet® Spray Tips

Optimize your Spray Efforts by Balancing Coverage & Drift

The Combo-Jet line of spray tips provide a sliding scale of droplet size to best fit your ideal application

110° Spray Tip Charts for Standard and PWM Sprayer Systems
- US Gallons/Acre on 20" Nozzle Spacing -

Revised Dec 2017

We make spray tips for applicators who care about how they spray.

The COMBO-JET® Advantage

- 40% Longer Strainers that snap into place
- Easier Handling with snap-in design
- SR MR DR UR 50% 75% 90% 90%+ Drift Reduction Series
- Fits all nozzle bodies [with available adapters]
- Not air induction, so spray tips work with PWM
- Easy to read cap label (MR110-06 = MR Series, 110° tip, 0.6 USGPM flow rate)
- Cap Color matches ISO flow rates
- Droplet Size Selective Tip Options
- Permanent Stainless Steel Tip
- The Best Tips for Pulse Width Modulation Systems* (e.g. Capstan Sharpshooter®/Pinpoint® II, Case AIMCommand®, Raven Hawkeye®, and more)

*Capstan Sharpshooter®/Pinpoint® II, Case AIMCommand®, Raven Hawkeye® are not affiliated or owned by Wilger. They remain property of their respective owner(s).

Easy-to-Handle Spray Tip Cleaning

SR, MR, DR & UR Series

To clean stainless tip
Pull strainer (with pre-orifice) up and out

To clean plastic pre-orifice
Push strainer sideways to release from pre-orifice

ER Series

Push strainer sideways to remove

To use/replace strainer
Push strainer down to snap in strainer

Simple as that.

Combo-Jet tips use a modern pre-orifice and closed chamber design that produces significantly less drift, while creating solid mass droplets, for **maximum spray velocity** and **more meaningful droplets.**

Without needing consistent air induction for controlling drift,
Combo-Jet spray tips have become the preferred tip for Pulse Width Modulation (PWM) spraying systems.

COMBO-JET® ER, SR, MR, DR, & UR Spray Tips – *What is the difference?*

The sliding scale of droplet size means at any flow rate, you have multiple options to match your desired spray.

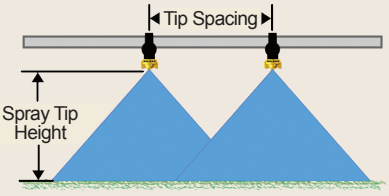
FINER SPRAY — 5 Series of Spray Tips for a Sliding Scale of Droplet Size — BEST DRIFT REDUCTION

Comparison Criteria	ER Series Extended Range	SR Series Small Reduction	MR Series Mid-Range Reduction	DR Series Drift Reduction	UR Series Drift Reduction
Spray Tip Design	Conventional Flat Fan	Pre-orifice Drift Reduction	Pre-orifice Drift Reduction	Pre-orifice Drift Reduction	Dual Chamber Drift Red.
Droplet Size[1] @40PSI	Smallest (246µ VMD[1])	Medium (371µ VMD[1])	Large (474µ VMD[1])	Very Large (529µ VMD[1])	Ultra Coarse
% <141µ[2] % <600µ[3]	20% of volume < 141µ 94% of volume <600µ	8% of volume < 141µ 89% of volume <600µ	4% of volume < 141µ 74% of volume <600µ	2% of volume < 141µ 64% of volume <600µ	UR spray tips are specialty spray tips, designed for certain chemical applications that require exceptional drift reduction. They are not be to be replaced with other spray tip series that are not approved to be on the chemical label. Always follow up-to-date label information. Refer to chemical application label for maximum pressures, speeds and application information. *More information available at www.wilger.net*
Drift Potential	Most likely to drift	Lower drift potential	Major reduction	Least likely to drift	
Coverage	Best	Excellent	Very good	Good	

[1]Based on an XX110-06 nozzle @ 40 psi (2.75 BAR)
[2]Droplets smaller than 141µ are more likely to drift. 141µ is used as a standard for estimating driftable fines.
[3]Droplets smaller than 600µ provide better coverage. Droplets > 600µ consume more spray volume, reducing overall coverage.

Minimum spray tip height for each series of Combo-Jet spray tips

Tip/Nozzle Body Spacing	Minimum Spray Tip Height		
	ER80, SR80, MR80 & DR80	ER110 Series	SR110, MR110, DR110 & UR110
10	10”	9”	13”
20	17”	15”	19”
30	26”	20”	24”



Not sure which tips to use? Download Tip Wizard @ www.WILGER.NET

Tip Wizard makes spray tip decisions easier using with charts.
Enter your application to receive great info that can help you make better spraying decisions.

TIP WIZARD

110° COMBO-JET® Spray Tips Charts For Standard Sprayers

Nozzle Spacing: 20" Application Units: US Gallons/Acre

WILGER

LEGEND

Recomended Pressure
For applications which require a uniform pattern, the recommended pressure range is provided. Specified pressure in chart is boom pressure.

For PWM spray systems, boom pressure will vary from spray tip pressure.

ASABE Spray Classification
(ASABE S572.1 Standard)

Spray quality is categorized based on Dv0.1 and VMD droplet sizes. 3rd party testing from spray spectrum recording equipment has been used to classify spray quality for this chart.

Data (e.g. VMD, etc.) can vary between testing equipment and method, and is provided as an educational resource only to compare different series of Wilger spray tips.

More information @ Wilger.net.

ASABE S572.1 Categories
The majority of chemical labels will require spray application relating to a spray quality, to achieve ideal efficacy and spray drift reduction.

- Fine (F)
- Medium (M)
- Coarse (C)
- Very Coarse (VC)
- Extremely Coarse (XC)
- Ultra Coarse (UC)

VMD
(Volume Median Diameter)

Size of the median droplet (in µ) for a sprayed volume. Half of the volume is made up of droplets smaller than VMD, with half made of droplets larger.

% <141µ
(% Driftable Fines)

Percentage of volume which is likely to drift. As wind conditions and boom height increase, observed spray drift will increased substantially.

% <600µ
(% Useful Droplets)

Percentage of volume which is made up of 'small' droplets. As % of useful droplets lowers, coverage is reduced.

Recomended Strainers
Recommended strainer & mesh size is determined by the size of a tip. For larger tips (08+), strainers are not typically required.

Pre-Orifice & Cap Color
SR/UR pre-orifices may vary from cap color. MR/DR pre-orifices will match cap color. Ensure correct pre-orifices are **always** used during application.

Teejet/Hypro/Arag to Combo-Jet Cap Adapter (#40204-00)

Combo-Jet Cap Adapters
Square Lug Compatibility

Combo-Jet® spray tips attach to Combo-Jet nozzle bodies. Use the #40204-00 adapater to use Combo-Jet spray tips on square lug nozzle bodies. (e.g. Teejet)

WILGER

TIP WIZARD

Use Tip Wizard
Spray Tip Selector App

Tip Wizard is an intuitive calculator that takes your application information (speed, rate, spacing, etc.) and gives you spray tip options that would suite your spray tip needs.

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm (Not limited to human, livestock or environmental).

Droplet Categories as per **ASABE S572.1** Classification (2009-current)

Extremely Fine Very Fine Fine Medium Coarse Very Coarse Extremely Coarse Ultra Coarse

*Droplet categories: The above chart is based on the ASABE Standard 572.1. Refer to chemical label to verify which ASABE S572.1 categories should be followed.

If you are tired of picking parts out of the dirt, you will really like COMBO-JET® spray tips!

The strainer, O-Ring, tip & cap all snap together tightly, so the parts don't fall apart when you take them off for service.

Combo-Jet spray tips are safer and easier to handle as one piece, and don't have any air induction ports to plug up.

110° COMBO-JET® Spray Tips Charts For Standard Sprayers

Nozzle Spacing: 20" **Application Units: US Gallons/Acre**

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Droplet Categories as per **ASABE S572.1** Classification (2009-current)

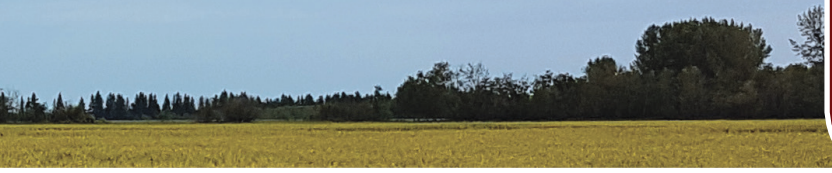
Extremely Fine | Very Fine | Fine | Medium | Coarse | Very Coarse | Extremely Coarse | Ultra Coarse

*Droplet categories: The above chart is based on the ASABE Standard 572.1. Refer to chemical label to verify which ASABE S572.1 categories should be followed.

Revised December 2017. Information may change without notice.



110° COMBO-JET® Spray Tips Charts For Standard Sprayers

Nozzle Spacing: 20" Application Units: US Gallons/Acre

WILGER

LEGEND

Recomended Pressure
For applications which require a uniform pattern, the recommended pressure range is provided. Specified pressure in chart is boom pressure.
For PWM spray systems, boom pressure will vary from spray tip pressure.

ASABE Spray Classification
(ASABE S572.1 Standard)
Spray quality is categorized based on Dv0.1 and VMD droplet sizes. 3rd party testing from spray spectrum recording equipment has been used to classify spray quality for this chart.

Data (e.g. VMD, etc.) can vary between testing equipment and method, and is provided as an educational resource only to compare different series of Wilger spray tips.
More information @ Wilger.net.

ASABE S572.1 Categories
The majority of chemical labels will require spray application relating to a spray quality, to achieve ideal efficacy and spray drift reduction.
- Fine (F)
- Medium (M)
- Coarse (C)
- Very Coarse (VC)
- Extremely Coarse (XC)
- Ultra Coarse (UC)

VMD
(Volume Median Diameter)
Size of the median droplet (in µ) for a sprayed volume. Half of the volume is made up of droplets smaller than VMD, with half made of droplets larger.

% <141µ
(% Driftable Fines)
Percentage of volume which is likely to drift. As wind conditions and boom height increase, observed spray drift will increased substantially.

% <600µ
(% Useful Droplets)
Percentage of volume which is made up of 'small' droplets. As % of useful droplets lowers, coverage is reduced.

Recomended Strainers
Recommended strainer & mesh size is determined by the size of a tip. For larger tips (08+), strainers are not typically required.

Pre-Orifice & Cap Color
SR/UR pre-orifices may vary from cap color. MR/DR pre-orifices will match cap color. Ensure correct pre-orifices are **always** used during application.

Teejet/Hypro/Arag to Combo-Jet Cap Adapter (#40204-00)

Combo-Jet Cap Adapters
Square Lug Compatibility
Combo-Jet® spray tips attach to Combo-Jet nozzle bodies. Use the #40204-00 adapater to use Combo-Jet spray tips on square lug nozzle bodies. (e.g. Teejet)

WILGER
TIP WIZARD
Use Tip Wizard
Spray Tip Selector App
Tip Wizard is an intuitive calculator that takes your application information (speed, rate, spacing, etc.) and gives you spray tips options that would suite your spray tip needs.

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm (Not limited to human, livestock or environmental).

Did you know that size matters?

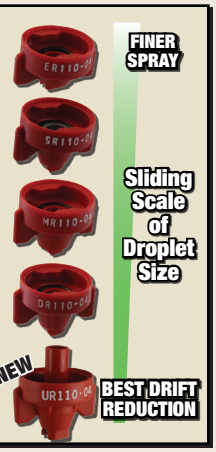
One 500 micron(µ) droplet deposits the **same volume** as 8x 250µ diameter droplets, or 64x 125µ droplets. That is why with smaller droplets, with the same flow rate, you get finer coverage. This makes it increasingly important to spray with the right size of spray to get the job done right.

Protect your livelyhood by using the correct spray tip.

Minimizing crop damage and maximizing chemical efficacy means more than just impacting the crop. Proper spraying is an important aspect of every farm's bottom line, financially, environmentally, and legally.

Each field's spray conditions can differ greatly, so it is imperative that spray tips match those conditions.

To achieve the best application control, use the Combo-Jet ER/SR/MR/DR/UR spray tip that matches your chemical applications' ideal droplet size or spray quality, and then adjust for your spraying conditions.
Use Tip Wizard or charts to help.



110° COMBO-JET® Spray Tips Charts For PWM Sprayers

Nozzle Spacing: 20" **Application Units: US Gallons/Acre**

Read the spray tip chart disclaimer on page 7, prior to reviewing the chart below.

LEGEND

Recomended Pressure
For applications requiring uniform pattern, the recommended pressure range (boom pressure) is provided.
For PWM spray systems, boom pressure will vary from spray tip pressure.

Duty Cycle
Effective "on-time" of PWM
PWM systems adjust rates by the length of time the solenoid stays open (duty cycle), in order to keep pressure constant for controlled spray quality. **Duty cycle is calculated by dividing your travel speed into the max speed of the spray tip at your pressure.** Min/Max operating duty cycles are 40-100%. (confirm with PWM mfg.)

ASABE Spray Classification
(ASABE S572.1 Standard)
Spray quality is categorized based on Dv0.1 and VMD droplet sizes by 3rd party testing from spray spectrum recording equipment.
Data (e.g. VMD, etc.) can vary between testing equipment and method, and is provided only as an educational resource to compare different series of Wilger spray tips.

The majority of chemical labels will require spray application relating to a spray quality, to achieve ideal efficacy and spray drift reduction.

- Fine (F)
- Medium (M)
- Coarse (C)
- Very Coarse (VC)
- Extremely Coarse (XC)
- Ultra Coarse (UC)

VMD
(Volume Median Diameter)
Size of the median droplet (in µ) for a sprayed volume. Half of the volume is made up of droplets smaller than VMD, with half made of droplets larger.

% <141µ *(% Driftable Fines)*
Percentage of volume which is likely to drift. As wind conditions and boom height increase, observed spray drift will increased substantially.

% <600µ *(% Useful Droplets)*
Percentage of volume which is made up of 'small' droplets. As % of useful droplets lowers, coverage is reduced.

Teejet/Hypro/Arag to Combo-Jet Cap Adapter (#40204-00)

Combo-Jet Cap Adapters
Square Lug Compatibility
Combo-Jet® spray tips attach to Combo-Jet nozzle bodies. Use the #40204-00 adapter to use Combo-Jet spray tips on square lug nozzle bodies. (e.g. Teejet)

Multi-tip & Multi-angle Spraying - Which to use When?

Using multiple spray tips at the same time can provide substantial gains in effective coverage into crops or applications that otherwise would be very difficult to cover; **however,** multi-tip spraying should not be used without reason.

Spraying **high volume out of a single tip** can produce droplets that are 'too large" to be effective for coverage, which make for ineffective spray application.

For improved application on herbicide resistant or problem weeds (like Pigweed - Palmer Amaranth), consider using COMBO-RATE® stacking nozzle bodies [right] to maximize canopy penetration & coverage; and try our dual-tip adapter [left] for applications on a vertical target like fungicide on ahead of wheat.

For an example, if you are targeting a medium spray quality (e.g. VMD of 275µ), applying 20 US GPA at 20MPH, you might be forced to use a ER110-125, which would produce a ~366µ VMD. Instead, split up the volume into two SR110-06 spray tips, which will allow better drift control (options to use an MR110-06), and get better control of coverage (~300µ VMD) as well.

Studies show using a coarser & finer spray at the same time is also useful in canopy applications.

Revised December 2017. Information may change without notice.

110° COMBO-JET® Spray Tips Charts For PWM Sprayers

Nozzle Spacing: 20” Application Units: US Galllons/Acre

WILGER

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm (Not limited to human, livestock or environmental).

Droplet Categories as per **ASABE S572.1** Classification (2009-current)

Extremely Fine Very Fine Fine Medium Coarse Very Coarse Extremely Coarse Ultra Coarse

*Droplet categories: The above chart is based on the ASABE Standard 572.1. Refer to chemical label to verify which ASABE S572.1 categories should be followed.

Spray 'Tips'

Looking for an Easier Way to Choose Spray Tips?

Tip Wizard is a interactive spray tip selection tool, that takes your known application information, and provides you with real actionable information that will help make the best choice of spray tip for your field. It is available on the wilger.net website, as well as downloadable for any smartphone device or tablet.
Don't wait until it is too late. Try it today!

TIP WIZARD
Download Tip Wizard

Drift vs. Efficacy

Generally speaking, smaller droplets deposit on the target more effectively than larger droplets, but larger droplets will drift less. So, when balancing drift control and efficacy, ensure to follow chemical labels and guidelines to designate the required droplet size/category.

ASABE S-572.1 Classification Category	Color Code	Estimated VMD Range for Spray Quality	Contact Insecticide & Fungicide	Systemic Insecticide & Fungicide	Contact Foliar Herbicide	Systemic Foliar Herbicide	Soil-Applied Herbicide	Incorporated Soil-Applied Herbicide	Fertilizer
Extremely Fine (XF)	Purple	Under 60							
Very Fine (VF)	Red	60-105	■						
Fine (F)	Orange	106-235	■						
Medium (M)	Yellow	236-340	■	■	■	■			
Coarse (C)	Blue	341-403		■	■	■	■	■	
Very Coarse (VC)	Green	404-502				■	■	■	■
Extremely Coarse (XC)	White	503-665					■	■	■
Ultra Coarse (UC)	Black	Over 665						■	■

The above table provides general guidelines regarding droplet size and spray quality used in most spray applications.
It is always required that you carefully read and follow updated chemical manufacturers application label and instructions.

Critical Importance of Spray Tip Maintenance & Proper Performance

Often, it is easy to dismiss considering replacing worn spray tips, as the pattern "still looks good" visually; but, what you often can't see can be creating a nasty mess of weed resistance due to misses or underapplication, or crop damage due to overapplication. Spray tips need to be considered the most important piece of the sprayer, as all results rely on their ability to do their job consistently.

Test Tip Flow Consistency
Flow should be within 10% of manufacturer's listed flow.
(e.g. 110-04 is 0.4 US gpm @ 40PSI)
Make testing a habit.

Check Spray Pattern
Pattern should be opened up fully.
Verify against a pattern check sheet.
Ensure clean orifice.
A little debris makes a difference.

Verify & Calibrate Boom Height
Using the correct spray tip angle for your typical boom height is paramount. With a boom too high or too low, the droplet deposition at your target is not consistent.
Even overlap and spray deposition is crucial.
