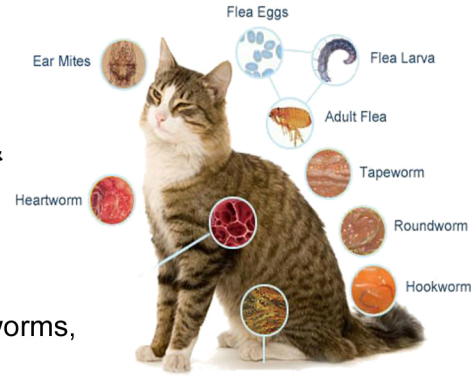
PARASITE PREVENTION FOR YOUR PET

Cats and dogs are susceptible to a number of parasitic infections. Many pet parasites are zoonotic, meaning they can infect people as well as animals.
Parasite prevention is not only important for the health of your pet but also for the health of your family.



Fleas and Ticks

Fleas and ticks are troublesome parasites of the skin. Flea & tick prevention is important because they cause skin problems, irritation, and transmit diseases.

Intestinal Parasites

Common intestinal parasites in dogs and cats include hookworms, roundworms, whipworms, tapeworms, and coccidia.
All of these organisms can cause illness in your pet.

Heartworm Disease

Heartworms reside in the heart & lungs of infected dogs and cats. This deadly disease is carried by mosquitoes, transmitting heartworm larva into the bloodstream with a bite.

There are many safe and effective treatments available, we are happy to assist you choose the right product.
As with all parasite prevention and treatments, always follow the directions for dosage & application.
