

# Framing a StumpCraft Puzzle

1. Choose a frame that is deep enough to accommodate the puzzle thickness
2. Decide if you want to display both the front and the back of the puzzle (recommended)
3. There is no glue or adhesives used on the puzzle, this is key if you want to be able to solve the puzzle again.
4. The puzzle is held into the frame using turnbuckles and an interior frame which holds the puzzle in place.
5. It is recommended you use a mat on the rear of the puzzle to fill any gaps and keep consistent pressure on the puzzle
6. It may help to use an acid free tape around the outside edge of the puzzle to help keep it together.

**TIP:** To move the puzzle around prior to framing use a rigid piece of cardboard and slide the puzzle onto the board. Using a second sheet of cardboard on the front you can flip the puzzle over as needed.
