HOT TEAZE

Here are a few tips.

**PREPARE:** By using the htz Root Lift Spray. Apply to the roots of your dry hair and allow a minute or 2 to dry. This assists with providing lasting results from your htz Hot Teaze and won't weigh the hair down.

1. **ADJUST:** Before using your new htz Hot Teaze remember to use the width control dial to adjust the opening.
2. **TEMPERATURE:** Turn the temperature dial to suit your hair. Thin, treated hair may prefer a lower temp (i.e. dial number 5), thick hair may require maximum temp (i.e. dial number 7 = 200 degrees).
3. **SELF SECTION:** Turn the width control dial so that there is only a small opening. Less than 1 cm is ideal. The smaller the width, the smaller the section, the **BIGGER** the results.
4. **START:** Start at the crown and using your free hand hold a large amount of hair firmly from scalp.
5. **TREAT:** Insert htz Hot Teaze tips all the way into section from any direction, clamp plates closed for approx. 1 second and release. Withdraw the appliance to move on and insert again. Continue multiple times close to the roots, until the full held piece of hair has been treated. This should be a quick, repetitive, no fuss process. Follow with another section of hair and eventually complete this process all over the scalp or wherever volume is required. Avoid your face line and parting.  
**HINT:** For long hair double the teaze width by applying the htz Hot Teaze at the roots and then one width out.
6. **FINISH YOUR LOOK:** For smoothing, flicking or curling the hair wind open the htz Hot Teaze and slide over the hair without fully engaging the plates. Now it will work like a straightener.
