

HOW IT WORKS

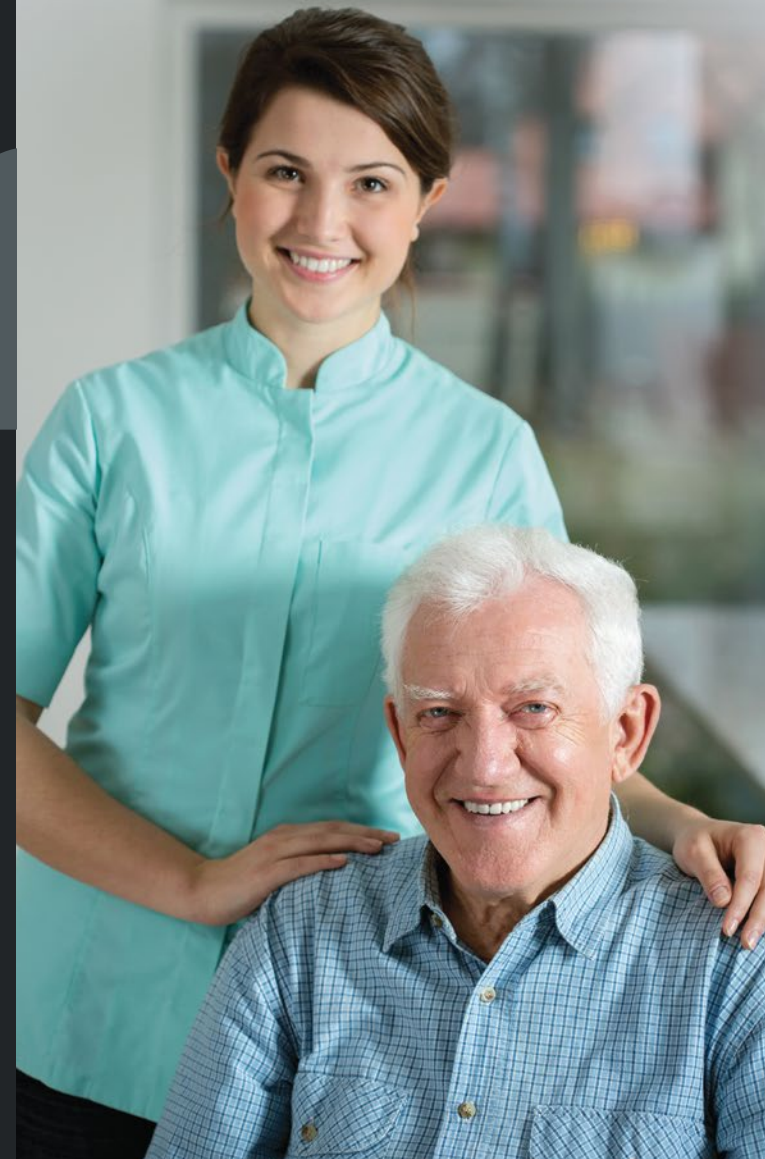

Your customer presses the bttn® to ask for assistance

Our bt.tn® cloud sends a notification to your system

bttn® lights up green and assistance is on its way

bttⁿ® in a nutshell

bttⁿ is a connected physical button. It simply triggers an action when pressed - or when not pressed.

Request assistance: the elderly can press the bttⁿ to request help. The alert can go to your server or directly to a group of people via SMS or email.

Reminder to take medication:

bt.tn cloud can be set to expect a bttⁿ press at certain times or it will trigger an automatic alert.

bttⁿs connect via mobile data or SIGFOX and run on batteries or USB chargers. They are available in two sizes: bttⁿ (Ø 100 mm) and bttⁿ Mini (Ø 69 mm).

Benefits

- **Universal, simple user interface:** People of all ages and cultures know how to press a bttⁿ.
- **Solid data security and privacy:** bttⁿs or the bt.tn cloud never store or send any private customer data, maintaining privacy in all events.
- **Works the way you want:** Connect bttⁿ to your system via HTTP(S) or REST API or have it simply send email or text messages.
