

Use and Care and Storage

When your cart is not in use please store them by hanging on a wall, or in a closet or garage empty. If you properly take care of your cart this way it will last you a lifetime.

Used in Salt Water and at the beach: After using the Plus One Cart in salt water and at the salty sandy beach, it is best to rinse off completely after your trip and especially before you store it at home in a closet or garage.

Storage of Plus One Cart: Our unique All-Rubber All-Terrain Amphibious wheels work great on boat docks, muddy and rocky terrains, and even packed sand. We do not recommend using the Plus One Carts in deep soft powdery sand. When not in use, please store your Plus One Cart empty. The Plus One Amphibious and All-Terrain wheels will not retain water if used under fresh or salt water in normal use. But please rinse off entire cart with fresh water after being used in Salt water and the beach.

Please store your Plus One Cart empty, hang it on a wall, or even store in your car or SUV trunk. Yes, you can carry 300 pounds on these wheels when in normal use in the garden, a boat dock or pier fishing trip, but limit load to 15 pounds on mud, sand, and gravel.

Storage of Removable Tub: When not in use, please do not leave tub outside full of water or dirt for a long period of time. This will cause the tub to bend and discolor in the sunlight. Even though we add a UV protection to the removable tubs, long exposure (weeks and months) will cause damage to the color and shape if left outside full of water, rocks or dirt.

If your tub was stored in an uneven position or in a hot car at an angle and it warped due to prolonged uneven storage, please fill the tub with warm water and let stand for several hours or one day. It should return to normal shape.
