WARNINGS

- Low Battery: The timer will stop working and the LED indicator (OFF) flashes red when battery power is low
- Do not expose timer to frost
- Only use clear fresh cold water
- Remove and store the timer in a dry place during the winter.
- Replace all batteries at the same time and reset the parameters.

BATTERY INSTALLATION

You better use Alkaline batteries - alternatives will result in incorrect operation.

Unscrew the controller by hand from the housing of water timer, remove the cap of the battery compartment positioned on the back side of the cover, being sure that the battery compartment is clean.

Insert 3*1.5V AAA alkaline batteries(not included) in the battery compartment.(Warning:Make sure to follow the right polarity as indicated in the compartment.)

Close properly the battery compart and replace the front cover, making sure correct position of the cable to avoid compromising their integrity and functionality of the unit control. After power-on, all LED lights turn on for 1 second and then go out. After the light is off, follow-up operation can be carried out.

TIMER INSTALLATION

Screw sleeve nut of the water timer on to the outdoor hose faucet and tighten firmly to avoid leaks.
