

MARKET UMBRELLA INSTALLATION

- Place umbrella base to where you intend to put/use the umbrella prior to putting the umbrella in the base plate tubing. When using the market umbrella it is the user's responsibility to ensure the umbrella is located on a level and stable ground for safe use and for correct installation.
- If the grass base is used and used on a grass/soft surface the steel pins will be supplied for use so ensure these are put into the ground (use a hammer) through the holes located in the base plate prior to putting the umbrella up. This will prevent the umbrella from falling.
- If the umbrella becomes unstable or in winding conditions, necessary precautions may need to be done to ensure this do not fall over. I.e. – add extra weight's to the base plate, take down the umbrella until conditions ease, move to another location and better surface.
- Once the base plate is in position and level/secured, insert the umbrella pole into the base piping and secure this by tightening the thumb screw knob into the umbrella pole.
- Ensure the umbrella strap is undone prior to winding up the umbrella.
- Wind umbrella handle in the direction that opens the umbrella until fully open and erect.
- To take down reverse the above order.
- When tacking down and storing the umbrellas are put on a sheet/clean surface to ensure they are kept clean and not damaged. Please Take care of the umbrellas.
- If unsure ask.

Please Note:

The umbrellas are supplied with either a concrete base or a flat steel base for the particular surface installation. These are supplied with the Umbrella as per the order.

When removing the umbrella pole from the base plate please ensure the **black plastic sleeve in the top of the base does not come out**. These do come loose and tend to come out when taking out the umbrella pole for the base plate tubing. **Please ensure these remain with the base or replacement charges will apply.**
