

Dry Camper Instructions

Dry campers (aka boondockers) routinely find themselves off the beaten path and away from civilization. This type of camping often requires packing water in and out and because they are storing water in their tanks, they may experience tank odors and sensor gauge issues more often than their full hook-up counterparts.

This Dry Camper Camping Pack is the perfect way to avoid many of the pitfalls that plague dry campers and their waste water systems.

Treating Your Holding Tanks With Unique Dry Camper Pack

Ready to hit the trail? Follow these guidelines to make sure your holding tanks remain in optimal operating condition:

- + Before you head out on your boondocking adventure, pre-charge your black and gray tanks with 2-3 gallons of fresh water.
- + Place one RV Digest-It Drop-In Pod in your toilet and let dissolve completely. Then flush.
- + Fill your kitchen sink with water and place one RV Digest-It Drop-In Pod in the water let dissolve. Drain your sink. You're ready to go camping!
- + If odors become excessive while you are camping, add one Tank Odor Eliminator Drop-In Pod to the tank that smells.
- + Before breaking camp, when possible, fill up both your gray and black tanks with fresh water and pour 16 oz. of Unique Tank Cleaner into each tank so that it can clean your tank walls, floors, and sensor gauges on the drive home.
- + After you are done with your dry camping trip, dump your tanks and flush them for 15-20 minutes to completely rinse out any excess waste inside your tanks.
- + We recommend you perform a deep clean on your black and gray tanks with Unique Tank Cleaner every few trips, or before you put your RV into storage for the year.

These are the most important tips for properly maintaining waste water systems, but you may want to dive deeper. For more tips and information, visit our website and click on the **RESOURCES tab** in the upper right corner.

Happy Camping!
