

## Full Hookup Camper Instructions

Camping with full hookups makes it easier to use adequate amounts of water and practice **proper black water care**. To compliment these practices, we have put together our **Full Hookup Camper Pack** to help you treat your holding tanks effectively and affordably while you camp with full hookups.

Many RVers understand how important it is to keep their waste water systems operating correctly. Using a quality waste digester and boosted toilet cleaner is the best way to treat your holding tanks while on full hookups.

It goes without saying that keeping your gray and black tanks functioning properly is absolutely critical. So it's no surprise that RV Digest-It has been the go-to product for savvy RVers for close to two decades.

### *Success Using RV Digest-It Liquid Formula In Your Black Tank*

RV Digest-It is an effective solution for digesting waste and eliminating odors when used properly. To ensure you get the optimal results we suggest the following holding tank best practices:

- + Always keep your black tank valve closed - except for when dumping your tank
- + Use ample water with every flush - we recommend holding the pedal down for 10 seconds each time you flush the toilet. This will hydrate the microbes and allow them to adequately break down solid waste.
- + Always keep water in your toilet bowl to prevent foul smells from seeping into your RV
- + Ideally you should dump your tanks every 3 - 4 days for optimal odor control. If you are going to extend the time between dumps, treat every 4 days to boost the microbial count inside your tank
- + Keep your tank temperatures below 85 degrees - if you believe the tank is exceeding 85 degrees, use more water with each flush and double the treatment dose
- + Flush your tank for 20 - 30 minutes every 5 - 10 dumps
- + Never clean your toilets with chemicals or bleach - use only Unique RV Toilet Cleaner
- + Before treating your tank with RV Digest-It add 2 -3 gallons of fresh water to the tank to jumpstart the bacterial cleaners

These are the most important tips for properly maintaining your black tank, but you may have more questions. If you would like to dive deeper, we have more tips and information on our website, including great tips for Gray Tank maintenance.
