

BARF For Cats

BIOLOGICALLY APPROPRIATE RAW FOOD

THE BEST FOOD TO
RAISE YOUR CAT
NATURALLY

WHY FEED RAW?

Cats are hunters and obligate carnivores. They will hunt and eat the entire prey animal and this include meat, bone and internal organs. This is where cats get their nutrients. Meat and bone will provide them with essential amino acids, fatty acids, minerals and collagen. Their digestive systems are adapted to digest a raw, meat based, grain-free diet. Cats have limited ability to digest carbohydrates.

Overly-processed or cooked food may lose vitamins, minerals and amino acids.

A nutritionally balanced BARF diet for cats mimics the way cats should feed in the wild. Cats have high requirement for taurine to live healthily.

Taurine is an amino acid that is present in raw meat and is especially high in organ like the heart.

Cats evolved to get most of their fluid intake from their prey animal and they do not drink as often as dogs. It is best to give cats moist food and especially raw ones. Every cat should be given a chance to have a taste of some raw diet. This will ensure the overall well being of your cats.

BARF

BARF For Cats

BIOLOGICALLY APPROPRIATE RAW FOOD

We use only the freshest human grade ingredients.

and Shinier Coat**

**Better Breath
and Healthier
Teeth**

**Smaller Stool
Volume and
Less Odour**

**Better Digestion
and Absorption
of Nutrients**

Complete and Balance Cat Food with

NATURAL TAURINE

FEEDING GUIDE

Do Not Cook

 **Adults** - Feed 2 to 4% of your cat's body weight per day. Divide the daily amount into 2 to 4 meals. If you feel your cat is thin, then start with 4% of his body weight per day and then reassess it later. If you have an overweight cat, then start with 2 %.

 **Kittens** – Feed 5 to 6 % of your kitten's body weight per day. Divide the daily amount into 4 to 6 meals *(Note : Remember to monitor and weigh your cats & kittens regularly to ensure they are fed the correct amount of BARF)*

 **Pregnant cats** – Feed as per normal in the first 3 weeks of pregnancy. Increase to 4 to 5% of her body weight from week 5 to week 7. Increase to 6 % in the last 2 weeks of pregnancy. Monitor your cat's weight regularly to adjust the amount you feed.

Switching recommendation: - A cat that has never taken a raw meal may need time to get use to BARF diet, so it is recommended that you introduce the Barf diet slowly. Start with 25 % of their daily amount then increase to 50% and gradually work towards 100%. By adding a teaspoon of plain yogurt to the meal will help with the process.

SUGGESTED FEEDING CHART

Body weight of your cat	Amount to feed (g) for 2% of body weight per day	Amount to feed (g) for 4% of body weight per day	Amount to feed (g) for 6% of body weight per day
2 kg	40 g	80 g	120 g
3 kg	60 g	120 g	180 g
4 kg	80 g	160 g	240 g
5 kg	100 g	200 g	300 g
6 kg	120 g	240 g	360 g
